EDUCATION

Madhav Institute of Technology and Science (MITS) Gwalior, MP
B.Tech in Information Technology; CGPA: 8.12/10 *Expected May 2027*
Relevant Coursework: Data Structures & Algorithms, DBMS, Machine Learning, Artificial Intelligence, Statistics, Linear Algebra

EXPERIENCE

Software Development Engineer (SDE) Intern Oct 2026 – Present
MSG91 *Indore, MP*
- Co-building **M91** (m91.msg91.com), a human-in-the-loop alert escalation platform that routes critical notifications via push, SMS, and voice calls until acknowledged; shipped multiple alerting features to production
- Built the M91 plugin for **viaSocket** (no-code workflow automation), exposing actions to send, fetch, and close direct/channel alerts and manage channels and recipients, so events from 1,500+ apps can trigger M91 alerts
- Developed viaSocket plugins integrating third-party apps through their APIs (triggers, actions, and authentication), and built automation workflows supporting MSG91's upcoming human-alert feature

AI Engineer Intern (GenAI & Agentic AI) Aug 2026 – Sep 2026
CogKnowEdge Solutions *Remote*
- Designed and implemented 7+ hands-on RAG systems (Agentic, Hybrid, Graph, Multi-Vector, OCR, and Vectorless RAG) using **LangChain, LangGraph, Qdrant, and Neo4j** for enterprise GenAI and Agentic AI training programs
- Containerized AI applications with **Docker** and deployed them to **GCP Cloud Run**, using MongoDB Atlas Vector Search and Supabase (**PostgreSQL**) as backend datastores
- Prototyped LLM apps with OpenAI, Claude, Gemini, and LangFlow for enterprise consulting; wrote lab guides

Undergraduate Research Assistant Jan 2026 – May 2026
Madhav Institute of Technology and Science *Gwalior, MP*
- Architected a two-stage **XGBoost** regression pipeline (GridSearchCV-tuned) reaching **R^2 = 0.96** and **85%** lower RMSE than baseline (215.6 vs. 1,452.3); a dynamic clamping step bounds outputs to physical limits, eliminating invalid predictions
- Built a stateless **FastAPI** microservice that calls LLM APIs to score semantic synergy and return structured JSON negotiation reports, with zero-trust API-key validation on every request

PROJECTS

Code Archaeologist – Git History RAG Platform | *Python*, *FastAPI*, *PostgreSQL*, *Pinecone*, *React*, *TypeScript*, *Docker* 2026
- Built and deployed (Docker on Render, Neon **PostgreSQL**) a multi-user web app that ingests a GitHub repo's commits, diffs, PRs, and reviews, then answers "why was this written?" questions citing the source commit SHAs
- Implemented hybrid retrieval (**Pinecone** dense search + **BM25** reranking, 60/40) with per-user, per-repo namespaces and background ingestion jobs; added adapters for 5 LLM providers with live model discovery
- Secured with JWT httpOnly sessions, bcrypt, GitHub App and Google OAuth (PKCE), Fernet-encrypted API keys, and per-IP rate limiting; covered by **70 pytest tests** and Alembic migrations

Tejaskrit – AI Interview Practice Platform | *Python*, *FastAPI*, *React*, *TypeScript*, *PostgreSQL*, *MediaPipe*, *Docker*, *Azure* 2026
- Took our SSH '26 1st Runner-Up team project to production on **Azure** (Docker, Caddy HTTPS, PostgreSQL): it reads a JD and resume, generates role-tailored questions, and runs a video interview with adaptive follow-ups
- Built the per-answer pipeline: ffmpeg → speech-to-text + librosa audio signals (pace, fillers, pauses) → **MediaPipe** eye-contact and posture analysis → weighted rubric scoring and a hire/no-hire report
- Added passwordless email OTP sign-in with rate limits, bring-your-own keys for 5 LLM providers, and DB-persisted sessions; tuned peak memory to ~550 MB to run on a 1 GB VM

Customer Segmentation & Churn Prediction | *Scikit-learn*, *XGBoost*, *SHAP*, *SMOTE*, *Pandas*, *SQL*, *Streamlit* 2025
- Engineered 22 RFM features from **2.5M+ transactions**; segmented customers with KMeans (k=4) and trained a Random Forest churn classifier (**ROC-AUC 0.879**), using SHAP to turn predictions into a $233,917 revenue-at-risk estimate

TECHNICAL SKILLS

Languages: Python, TypeScript, SQL, Java, C/C++
Backend & Web: FastAPI, SQLAlchemy, Pydantic, REST APIs, JWT & OAuth 2.0, React, API Integrations, viaSocket Plugins
Databases: PostgreSQL (Neon, Supabase), MongoDB (Atlas), SQLite, Neo4j
Cloud & Tools: Docker, Azure VM, GCP Cloud Run, Render, Caddy, Alembic, pytest, Git, GitHub
AI & LLM Systems: LangChain, LangGraph, RAG, Pinecone, Qdrant, MongoDB Atlas Vector Search, OpenAI / Claude / Gemini APIs
ML & Data: Scikit-learn, XGBoost, SHAP, Pandas, NumPy, OpenCV, MediaPipe, librosa, Whisper

ACHIEVEMENTS

- 1st Place (team), IKIGAI '26 National-Level Hackathon, AITR Indore — Aug 2026
- Top Performer, Web Development Track, Hacksagon, ABV-IIITM Gwalior — Apr 2026
- 1st Runner-Up (team Tejaskrit), SSH '26 National Hackathon — Feb 2026
- NPTEL Certification: Mathematical Foundations of Machine Learning, IIT Madras (score 73/100) — 2026
